- 32% of **Top 100** contractors
- 14 of the **Top 50** consultants
- Over **50,000** construction users each day

ORACLE PARTNER

informate

Locate, manage and share business knowledge

Knowledge is stored in all parts of your business and getting access to this knowledge is the real challenge that your organisation faces. If every member of staff had access to the information and stored knowledge within your business they will make better decisions. They will also save substantial amounts of time and will save your business money.

Technology plays a fundamental part in delivering this vision. That's why RedSky IT developed Informat - a toolset to locate, manage and share business knowledge.

Informat is unique because staff only need a web browser to get to information stored in your business. No complicated software to install and manage. No training for users to navigate specialist systems.

Users simply logon securely and they are presented with an enterprise portal that's relevant to them and their job. Imagine unlocking all of the knowledge stored on file servers, within specialist software such as financial accounts, estimating, marketing, planning and content from your existing intranet.

Informat will provide you with a toolset to improve Knowledge Management within your business.

So how does Informat work?

We deploy a packaged solution with a range of modules for each area of information management. You can be up and running quickly avoiding costly bespoke work. It's completely configurable to offer you the chance to manage the way it delivers what information to whom, using in-built security.

Informat produces a hierarchy of folders that structure around business areas, projects or departments - depending on how you decide to organise it. A popular approach is by project. Each project contains a predefined set of folders which contain any item of information that is connected to the project.

Example - Project Olympic Stadium (OS)

As a project manager you will logon to Informat (wherever you are). Your profile will determine that you will see Project OS (amongst others) in your folder structure. Within the Project OS folder structure you will be able to access:

- Maps, drawings (with revision history)
- Project plans (that are shared checked in/out)
- Up to the minute live cost enquiry reports, timesheet reports, billing reports

- Standard documents like Site Survey forms, Health & Safety
- Project tenders, estimates and bids
- Email correspondence & discussion threads
- Contacts - the project team details and skills
- Suppliers, JVs & 3rd parties working on the project
- Forms and procedures that need completing

So it does not matter what the information type is, or what it is created within, or where it is located - Informat will locate it, manage it and display it.

www.redskyit.com

Informat features

- Powerful search engine
- News engine
- Project, department and enterprise views
- Access to back office systems
- Corporate contact database
- Contact management system for CRM
- Tasks, alerting and content subscription
- Template documents
- Document management with version control
- Email management
- Discussion tool
- Workflow management
- Online surveys
- Historical content index
- Design customisation
- Collaboration tool - for 3rd party access
- Web content management tool

Delivering real benefits

- Reduce duplication of effort spent searching for information
- Share knowledge and best practice around your business
- Increased user productivity through improved & relevant access to information
- Avoid re-inventing the wheel producing content
- Lower cost of ownership with quick deployment
- Easy to use tool avoiding the need for training
- Consolidate business content into a single repository
- 24/7 single portal access for all business information
- Improved customer satisfaction by providing information online
- Reduce reporting demands using subscriptions and alerts
- Open up systems to users with minimal software licence costs
- Publish web content yourself saving costs
- Increased collaboration with customers, suppliers, partners
- Develop & manage systems yourself using the toolset
